

Full wwPDB NMR Structure Validation Report (i)

Sep 28, 2024 – 10:11 pm BST

PDB ID	:	10HN
Title	:	Three-dimensional structure in lipid micelles of the pediocin-like antimicrobial
		peptide sakacin P.
Authors	:	Uteng, M.; Hauge, H.H.; Markwick, P.R.; Fimland, G.; Mantzilas, D.; Nissen-
		Meyer, J.; Muhle-Goll, C.
Deposited on	:	2003-05-28

This is a Full wwPDB NMR Structure Validation Report for a publicly released PDB entry.

We welcome your comments at *validation@mail.wwpdb.org* A user guide is available at https://www.wwpdb.org/validation/2017/NMRValidationReportHelp with specific help available everywhere you see the (i) symbol.

The types of validation reports are described at http://www.wwpdb.org/validation/2017/FAQs#types.

The following versions of software and data (see references (i)) were used in the production of this report:

wwPDB-RCI	: : :	20231227.v01 (using entries in the PDB archive December 27th 2023) v_1n_11_5_13_A (Berjanski et al., 2005) Wang et al. (2010) v1.2
Ideal geometry (proteins) Ideal geometry (DNA, RNA) Validation Pipeline (wwPDB-VP)	:	Parkinson et al. (1996)

1 Overall quality at a glance (i)

The following experimental techniques were used to determine the structure: $SOLUTION\ NMR$

The overall completeness of chemical shifts assignment was not calculated.

Percentile scores (ranging between 0-100) for global validation metrics of the entry are shown in the following graphic. The table shows the number of entries on which the scores are based.

Metric	Percentile Ranks	Value
Clashscore		0
Ramachandran outliers		0
Sidechain outliers		0
Wor		Better
Pe	tile relative to all structures	
[] Pe	tile relative to all NMR structures	
	Whole archive	NMR archive

Metric	Whole archive $(\#$ Entries)	NMR archive (#Entries)		
Clashscore	210492	14027		
Ramachandran outliers	207382	12486		
Sidechain outliers	206894	12463		

The table below summarises the geometric issues observed across the polymeric chains and their fit to the experimental data. The red, orange, yellow and green segments indicate the fraction of residues that contain outliers for >=3, 2, 1 and 0 types of geometric quality criteria. A cyan segment indicates the fraction of residues that are not part of the well-defined cores, and a grey segment represents the fraction of residues that are not modelled. The numeric value for each fraction is indicated below the corresponding segment, with a dot representing fractions <=5%

Mol	Chain	Length		Quality of chain
1	Δ	43	200/	720/
1	А	40	28%	72%

2 Ensemble composition and analysis (i)

This entry contains 10 models. Model 9 is the overall representative, medoid model (most similar to other models). The authors have identified model 1 as representative.

The following residues are included in the computation of the global validation metrics.

Well-defined (core) protein residues					
Well-defined core Residue range (total) Backbone RMSD (Å) Medo					
1 A:20-A:31 (12)		0.23	9		

Ill-defined regions of proteins are excluded from the global statistics.

Ligands and non-protein polymers are included in the analysis.

The models can be grouped into 2 clusters and 3 single-model clusters were found.

Cluster number	Models
1	1, 3, 4, 6, 9
2	7, 10
Single-model clusters	2; 5; 8

3 Entry composition (i)

There is only 1 type of molecule in this entry. The entry contains 595 atoms, of which 282 are hydrogens and 0 are deuteriums.

• Molecule 1 is a protein called BACTERIOCIN SAKACIN P.

Mol	Chain	Residues		A	Atoms	5			Trace
1	1 A	49	Total	С	Н	Ν	0	S	0
		A 43	40	595	192	282	60	59	2

4 Residue-property plots (i)

4.1 Average score per residue in the NMR ensemble

These plots are provided for all protein, RNA, DNA and oligosaccharide chains in the entry. The first graphic is the same as shown in the summary in section 1 of this report. The second graphic shows the sequence where residues are colour-coded according to the number of geometric quality criteria for which they contain at least one outlier: green = 0, yellow = 1, orange = 2 and red = 3 or more. Stretches of 2 or more consecutive residues without any outliers are shown as green connectors. Residues which are classified as ill-defined in the NMR ensemble, are shown in cyan with an underline colour-coded according to the previous scheme. Residues which were present in the experimental sample, but not modelled in the final structure are shown in grey.

Chain A:	28%	72%

5 Refinement protocol and experimental data overview (i)

The models were refined using the following method: MOLECULAR DYNAMICS/SIMULATED ANNEALING.

Of the 50 calculated structures, 10 were deposited, based on the following criterion: LEAST RESTRAIN VIOLATION AND OVERALL ENERGY.

The following table shows the software used for structure solution, optimisation and refinement.

Software name	Classification	Version	
Amber	refinement	6	
ARIA	structure solution		
Amber	structure solution		

No chemical shift data was provided.

6 Model quality (i)

6.1 Standard geometry (i)

There are no covalent bond-length or bond-angle outliers.

There are no bond-length outliers.

There are no bond-angle outliers.

There are no chirality outliers.

There are no planarity outliers.

6.2 Too-close contacts (i)

In the following table, the Non-H and H(model) columns list the number of non-hydrogen atoms and hydrogen atoms in each chain respectively. The H(added) column lists the number of hydrogen atoms added and optimized by MolProbity. The Clashes column lists the number of clashes averaged over the ensemble.

Mol	Chain	Non-H	H(model)	H(added)	Clashes
1	А	75	73	73	0 ± 0
All	All	750	730	730	-

The all-atom clashscore is defined as the number of clashes found per 1000 atoms (including hydrogen atoms). The all-atom clashscore for this structure is -.

There are no clashes.

6.3 Torsion angles (i)

6.3.1 Protein backbone (i)

In the following table, the Percentiles column shows the percent Ramachandran outliers of the chain as a percentile score with respect to all PDB entries followed by that with respect to all NMR entries. The Analysed column shows the number of residues for which the backbone conformation was analysed and the total number of residues.

Mol	Chain	Analysed	Favoured	Allowed	Outliers	Percentiles
1	А	12/43~(28%)	12 ± 0 (98 $\pm4\%$)	0±0 (2±4%)	0±0 (0±0%)	100 100
All	All	120/430~(28%)	117 (98%)	3~(2%)	0 (0%)	100 100

There are no Ramachandran outliers.

6.3.2 Protein sidechains (i)

In the following table, the Percentiles column shows the percent sidechain outliers of the chain as a percentile score with respect to all PDB entries followed by that with respect to all NMR entries. The Analysed column shows the number of residues for which the sidechain conformation was analysed and the total number of residues.

Mol	Chain	Analysed	Rotameric	Outliers	Percentiles	
1	А	6/28~(21%)	6±0 (100±0%)	0±0 (0±0%)	100	100
All	All	60/280~(21%)	60 (100%)	0 (0%)	100	100

There are no protein residues with a non-rotameric sidechain to report.

6.3.3 RNA (i)

There are no RNA molecules in this entry.

6.4 Non-standard residues in protein, DNA, RNA chains (i)

There are no non-standard protein/DNA/RNA residues in this entry.

6.5 Carbohydrates (i)

There are no oligosaccharides in this entry.

6.6 Ligand geometry (i)

There are no ligands in this entry.

6.7 Other polymers (i)

There are no such molecules in this entry.

6.8 Polymer linkage issues (i)

There are no chain breaks in this entry.

7 Chemical shift validation (i)

No chemical shift data were provided
